DESCRIPTION

Discover an even clearer viewing experience with the α7 intelligent processor which reduces video noise, plus LG ThinQ AI and 4K Cinema HDR. A slender bezel accentuates the LG SUPER UHD Nano Cell™ Display improves color accuracy. A Full Array LED-backlight allows more precise local dimming control.

KEY FEATURES

α7 Intelligent Processor

Enjoy a more lifelike picture with superior depth, sharpness, and remarkably accurate color. The α7 Intelligent Processor delivers an enhanced 4K HDR image for a truly cinematic experience.

LG ThinQ AI

LG ThinQ AI televisions become the hub for all of your connected smart devices. Beyond apps and entertainment, LG ThinQ AI uses intelligent voice control with Google Home built in, plus Amazon Echo compatibility to create a Smart TV platform for the Internet of Things.

4K Cinema HDR

LG SUPER UHD gives viewers the most premium content choices, all optimized scene-by-scene. Comprehensive high dynamic range support now includes HDR10 and HLG, plus cinema reference standard Dolby Vision® as well as Advanced HDR by Technicolor, the movie industry's color experts

Full Array Dimming

LG uses a full array LED backlight across the entire screen for more precise local dimming control, enhancing the contrast and maintaining deep black levels while revealing outstanding picture detail.

Nano Cell™ Display

The latest generation of Nano Cell™ Display improves color accuracy with its wider color gamut while absorbing unwanted light. Nano Cell™ Display now results in truer colors, reduced reflectivity and deeper black levels, even at a wider viewing angle so any seat can be the best in the house.
